Seccion 5.3: explicación

Para calcular la fecha de entrega usamos el ya mencionado y pues mostrado en clases Calendar.getInstance() y le sumamos el plazo con .add(Calendar.DAY_OF_YEAR, plazo), lo que resuelve en automático los cambios de mes o saltos de año sin complicarnos la vida con cálculos manuales, ahora bien, para saber si hay multa, verificamos si existe un atraso con el método .after() y sacamos los días exactos restando los milisegundos de ambas fechas con getTimeInMillis() para luego dividir el resultado entre los milisegundos que tiene un día completo. Por último, aplicamos SimpleDateFormat para que la fecha final se muestre limpia y bien clara directamente en la interfaz gráfica.
